

Z-SCORES SUMMARY

Compaction – May/June 2024 (121)

This Program was originally scheduled for March 2024 but was conducted in May/June 2024 with participants throughout Australia (further information on this will be covered in the final report). The AS 1289.5.1.1 test method was preferred; however, technically equivalent alternative test methods were accepted.

A z-score summary is provided to allow participants to gauge performance and address outliers as early as possible. It is recommended that any remedial action be undertaken cautiously until the final report for the program has been consulted.

The z-scores shown are unlikely to change significantly. Small changes, however, may become necessary during the preparation of the final report. The final report provides other information, apart from z-scores, that may be used to assess performance and interpret the significance of outliers.

Participants may forward the summary report to NATA as an indication of a participant's general performance. The final report, once issued, supersedes the z-score summary.

All participants must assess their overall performance once the final report has been issued.
